Everything you can do with Vision

This is the full list of Vision's features. We design the system for your home, install it and maintain it: you use a single app.

01

Security

Works without power or internet	A backup battery and a mobile connection keep the system running even during a power cut or when the internet drops.
24/7 monitoring centre, if you want it	A partner centre checks every alarm, contacts you and, if needed, alerts the police. Add it or remove it whenever you like.
Tamper alerts	If someone removes a sensor or covers a camera, you know right away: nobody can switch the system off behind your back.
Smoke and carbon monoxide, always	The detectors stay on even when the alarm is off and alert you straight away to a fire or a gas leak.
Sensors on doors, windows and motion	If someone gets in, the siren sounds and a notification tells you at once which sensor went off.
Emergency contacts	If nobody answers during an alarm, the system automatically phones the people you chose, such as a neighbour or a relative.
Arm in one tap	Full when you leave, night mode when you're home: in two taps from the app, or from the keypad by the door.
Help in one tap	During an alarm the app shows you the button to call emergency services straight away.
Time to come and go	You choose how long you have to leave, or to disarm when you come back, before the alarm goes off.
False alarms cancelled	If you set it off by mistake, you cancel it with your code within a few seconds.

02

Cameras

Video doorbell	See and talk to whoever rings from the app, even when you're out, and know when a courier leaves a parcel.
Alerts only when it matters	Cameras tell people, animals and vehicles apart, so you don't get a notification for every movement.
Privacy at home	Indoor cameras switch off when you disarm the alarm: nobody films you while you're at home.
Indoor cameras only for those you choose	Only you and the people you authorise, one by one, can see them.
The monitoring centre looks only during an alarm	Outdoor cameras only during an alarm; indoor ones only if you accept its request, and only for that alarm.
Live view and recordings	Watch live in the app, review recordings and export the video to hand to the police.
Privacy for the neighbours	The public street and the houses next door stay masked in the footage.
On and off whenever you want	You can turn each camera off and on by hand, from the app.

03

Home

"Leaving", "Coming home" and "Night" scenes	One tap and alarm, door, lights, heating and shutters do what's needed. We tailor them to your home.
Heating and cooling	Temperature and schedules from the app; it switches to eco mode when you leave and your home is warm when you're back.
Wall panel	A screen at home to control everything without a phone, with a simple view for children and guests.
Door unlocked in a fire	If the smoke alarm goes off, the door unlocks by itself: everyone gets out fast and help gets in.
Your own automations	On top of our scenes, create your own with a simple editor, for example garden lights at sunset.
How much you save	The app shows you an estimate of your savings on heating.
Lights, one by one or by room	On, off, dimmed or coloured, also automatically by time and daylight.

Garage	See whether it’s open and close it remotely; “Leaving” closes it for you.
Shutters	Opened and closed from the app, also within scenes: for example they come down when you leave.
Automatic locking	The door locks itself when you leave or after the time you choose.
Who comes in and when	You always know whether the door is locked, who opened it and when.
Door from the app	Lock and unlock wherever you are, confirmed with your fingerprint, face or a code.

04

App and family

Temporary access	For cleaners, guests and tradespeople, only on the days and hours you choose: a time-limited account or a temporary code.
Voice control	If you already have Alexa or Google Assistant at home, you can use them with Vision too.
One account per person	Each with their own permissions, down to single devices: for example only the lights in their own room.
Scenes from a widget	Start them from your phone without opening the app; those that disarm the alarm ask for your fingerprint, face or code first.
Event history	Alarms, arming, door openings and every access by the monitoring centre or technicians.
Two-factor authentication	Besides the password a second check is needed: nobody gets in with the password alone.
Notifications your way	Everyone chooses which alerts to receive.
Your subscription in the app	See your plan, add or remove the monitoring centre, ask for support or a change to your scenes.

05

The service

Designed for your home	We get to know your home and choose the right devices and where they go.
Installation and setup	Our technicians fit everything and set up the scenes: you install nothing.
Maintenance included	We check connection, batteries and faults remotely, and step in before you notice.
Support only with your permission	Technicians access the system only if you allow it, and never the cameras.
